

# Reglyze On-Prem

NIS2 compliance, AI-driven, deployed in your own infrastructure.

NIS2 and its national transpositions require an information-security management system from thousands of essential and important entities. For many of them, compliance data is too sensitive for a cloud service. Reglyze meets that constraint: the same engine, the same AI, entirely on your premises.

## ■ FOR WHOM

Essential and important entities that, for reasons of sovereignty, data residency or internal policy, cannot or will not use a cloud service, and the MSPs that host for their regulated clients.

## ■ THE PRINCIPLE

Reglyze installs entirely on your own servers, in containers. Your assessments, documents and compliance data never leave your perimeter. The AI that builds your assessment and writes your policies is driven by your own key: you keep control of the provider and the region.

## ■ WHAT YOU GET

- A native assessment of your national framework
- AI-generated policies and documentation, in your language
- Remediation, suppliers, incidents and exercises, all in-house
- Continuous regulatory updates as your transposition evolves

## ■ THE MODEL

Perpetual licence: you run Reglyze forever, on your premises. An annual maintenance and support subscription keeps your engine and your framework current. Pricing on quote.

## ■ WHY REGLYZE

An AI-native compliance engine, and one of the few that runs entirely on your own infrastructure: the speed of AI, plus full control of your data.

## ■ LET'S TALK
